

Insurance Claim Support

Steadfast Forensic Engineering has provided support for insurance claims in over 1,000 different claims. This experience enables us to efficiently investigate claims and provide you with information necessary to make decisions concerning your insured. Our experience in the field of claim support includes the following areas of expertise:

- Roof covering assessment
- Wind, hail, and storm damage to roof coverings
- Water infiltration
- Structural collapse (decks, columns, beams, engineered wood components, undermining)
- Damage to premises from adjacent construction activities
- Pre-litigation investigations
- Fire and explosion (cause and origin)
- Faulty construction
- Construction process (delay claims)
- Catastrophic loss due to tornado, hurricane, rising water, flood, wind-driven water

In many cases, we are able to initiate our investigation on the next day after initial contact. While rarely needed, we can respond to an incident that requires observation and documentation of the scene on a same day basis. If the scene has been restricted by law enforcement, fire/EMS or other government authorities, Steadfast Forensic Engineering would be limited in providing documentation and/or recovery of evidence until such time as access to the scene is allowed by the controlling authorities.
